

### Suggestions for fitting a Prokraft CGA Coffee Mill Kit:

There are many ways to make a suitable box on which to mount a coffee mill kit, the most common being a square traditional box with a small drawer underneath.

Here we will show you a couple of other suggestions that may be a little different:

- 1] Bandsaw box – this is probably the easiest way to make your own complete box if you have a bandsaw. The shapes that can be made are varied and interesting and often no 2 bandsaw boxes are alike which is great for a hand made unique product:

Here we have made one in beech approx 100mm x 100mm x 70mm

- 2] A Kilner type jar also makes a great base.

Remove the wire and rubber fittings from the existing jar and copy the dimensions for those fittings

Use a 45mm forstner bit to drill mountings for your lathe

Very simple yet very effective

- 3] A turned wooden box with pull-out drawer

This is probably the most impressive but also the most challenging to make well.

We have a dedicated guide to start you off on this type of project which is available on our website

Whichever you choose we hope you enjoy making the kit and enjoy a freshly brewed coffee afterwards.
