

Why buy a Prokraft coffee grinder kit?

Here at Prokraft we pride ourselves on testing all our kits to make sure we get a product that is not only good value but is fun to make and is, most importantly, a usable product.

The Prokraft coffee grinder kit is no exception and whilst it is not the easiest kit to fit the advantages offered over other kits meant this was the best kit available. It is a kit designed to be used for grinding coffee – not as a decorative piece alone.

But don't take our word for it here are the reasons why it is so much better than most other kits:

The primary reason the Prokraft grinder is different from most is that the entire grinder mechanism is inset in the lid of the grinder. This means a larger blank is required but it also means that the finished piece is heavier and much more stable in use.

If you regularly grind coffee you will know that the stability of the grinder when in use is the difference between a pleasant and easy grinding experience against a really difficult chore

You will see that the mechanism is secured with 3 screws on the top dome and 3 screws underneath for the grinder housing – this gives an inherent strength to the finished piece and a premium quality feel.

We have chosen a model with dome cover and closing lid to prevent any foreign bodies falling into the hopper and the larger grinding handle offers a comfortable grip in use

If you are a coffee lover you will know that a quality grind means a great cup of coffee
