

Assembling the Nibster Pen Kit

Drill size for tube = 9.5mm
Bushing Set = PKR ROLLBSH

1] It is important that the kit is made to the length of the brass tube, do not lengthen or shorten it. The 2 bushings are slightly different sizes, the larger 11.3mm is for the writing / nib end the smaller 11.1mm is for the heel end of the kit

2] Insert and push-fit the nib connector using a suitable tool (vice / lathe / press etc)

3] Place the pocket clip over the end cap and start to push into the heel end of the kit:

NB: DO NOT PUSH IT IN COMPLETELY UNTIL YOU HAVE ALIGNED THE POCKET CLIP AND WRITING NIB

4. Screw in the writing nib, turn and align the pocket clip so it points at the top of the nib (where it is engraved) remove the writing nib and push home the end cap and pocket clip.

5] Fit your choice of ink supply – either standard sealed ink cartridge or use the ink converter and bottled ink

6] Your pen is now finished and ready for use, the pen cap can be removed and posted on the end cap when writing.
